

# The Miracles of Pot

Volume 1, Issue 3

03/05/2003 by  
Hasche Grumble

*Inside you will find out:*

- Why is marijuana called man's new best friend?
- Why civil disobedience works.
- What is the social impact of legalizing it now?
- How big is the Pot Market in the US?
- 

*Inside this issue:*

Imported or Domestic?	2
Hemp as water sealant material	2
Rope, Canvas prefer Hemp	2
Civil Disobedience	3
Fewer Poisons to Grow Hemp	3
Money at root of all Evil	3
Legalize Pot Fight Terrorism	4

## Marijuana Really is Man's Best Friend

The marijuana plant really is the modern miracle plant. It has the potential to turn the world upside down – providing us with a renewable source of food, shelter, energy, clothing, fuel, medicine, and so much more.

It can produce more food per acre per year than the best food crops we know. It can produce four times more building material or biomass per acre than the fastest growing wood on an average basis per year. It's most valuable product, marijuana for smoking, is about half the price of gold per ounce, and one plant can produce as many as 30 ounces in a season.

Making it legal to grow marijuana for sale in this state

makes a lot of sense. People are already smoking it, so you would not be creating a new market or introducing any new risks, only channeling the money back into the local economy instead of exporting our money overseas.

Pot can solve all the major topical issues facing mankind such as hunger, poverty, and depletion. Global warming can be reversed, pollution reduced, and cars will run cleaner on hempseed fuels and oils.

By growing and exporting pot, while stopping the flow of illegal imported pot and other drugs coming into our country, we can bring our country and our children out of harms way.

Pot is the alternative to hard drugs, and it can become the

alternative to alcohol as well. It leaves the user in a much better frame of mind than any other drugs, and also leaves the user fully functional, even able to drive normally when stoned.

We don't advocate driving high, but history shows us that it is not as unsafe as it sounds. Car & Driver magazine did a story on it in the late 70s and they did actual driving test experiments with smokers, drinkers, and a test group which was straight.

Only the drinkers missed any points at all, and had to stop early due to poor judgement.

## Pot Makes Great Medicine

Medicine will benefit tremendously, at the expense of the great drug companies, when it comes to the conclusion that marijuana is more helpful in treating most ailments than most of the things they now prescribe. Aches, pains, fever, cough and sore throat, colds,

nausea, and much more are easily treated by smoking marijuana, which also tends to build the immune system and help clear the lungs of inhaled particles that would otherwise stay there.

Depression and bipolar disorder can be treated with great

success, and it has been long known an excellent supplemental treatment for gout.

Until 1937, marijuana was listed in the big medical journals as legitimate medicine and prescribed widely.

---

## Import or Domestic?

There's a big difference between growing pot right here (which is currently illegal) and importing it (as we currently do). In fact there are many differences.

Imported pot is often laced with solvents or other chemicals to conceal their smell, making it easier to get thru customs. They are also sometimes treated with agents to make them sticky, or weigh more.

Domestic pot is grown right here in this country, by you or your

neighbor. There is nothing added to domestic pot, it is sold fresh every fall for about three weeks, until supplies run out. Then its back to imported pot for most people who smoke.

Approximately ten percent of the population smokes marijuana on a regular basis. That means that 25 to 30 million Americans smoke pot. With that number as a guideline, you can project the amount of revenue that is lost each year.

It would take about 20 square miles, or 12800 acres to grow the necessary 68 million pounds of pot needed for a year's supply for the current users alone.

With street prices for good marijuana being in the neighborhood of \$200 an ounce, that would amount to well over \$200 billion a year, cutting our trade deficit in half.

That's before we export any.

“25 to 30 million Americans smoke pot.”

## Hemp Useful as a Water Sealer

Hemp is a multipurpose material if there ever was one. Among its many features is the unique ability of the fibers to swell up when they come in contact with water, enabling a loose wad of hemp fiber to become a tight-fitting seal when wet.

While this may not seem important at first glance, it could easily change the way we waterproof

concrete, glass, wood, and many other materials.

By using inexpensive fiber made from hemp, you can cut the cost of sealants by up to 80% or more and reduce waste.

Pollution given off by the production of PVC and metal piping is reason enough to switch to hemp—there are few environ-

mental impacts in hemp plumbing of any sort, save for an occasional leak.

When fire strikes a PVC pipe, however, there is poison in the air. In fact, the workers who made the pipe are probably already in poor health as a direct result of working around those particular plastics on a regular basis. We need hemp.

“Clothing made from hemp can easily last a lifetime. It can be dyed into any color, and made with any texture you prefer..”

## Hemp is Best Rope, Canvas Material

When it comes to rope and canvas, sailors probably know best. They have to rely on both to travel, and quality means everything when you are in a storm on the open water.

Hemp rope doesn't rot like other ropes, has better stretching properties than nylon and is

about twice as strong per pound as other rope materials.

Canvas made from hemp is the finest quality, producing smoother textures and longer wear. It also has much greater resistance to tears and cracking over time. Hemp canvas lasts up to six times longer as sails.

Fine grade fabrics can be made directly from hemp, and hemp-seed composites can give us compounds just like nylon, rayon, and most other plastics.

Clothing made from hemp can easily last a lifetime. It can be dyed into any color, and made with any texture you prefer.

## The Role of Civil Disobedience

There are a lot of things they won't tell you.

Civil Disobedience is a method of showing lawmakers that a law is either unwanted or unenforceable. It is not recommended, but is quite effective if enough people participate. It tends to take on many forms.

The most common form of civil disobedience is observed while driving. You may or may not follow the posted speed to the letter (er, number) but you

have to admit that some drivers do speed.

There are always drivers speeding, but usually you see most of them speeding just a little, maybe 8 or 10 over the posted speed, just enough to avoid a ticket.

Well, that's just a perfect example of what civil disobedience will get you—ten more miles per hour! That's right, because so many people drove a little over the posted speed, they started allowing you a few miles over in

most places.

The same can happen with marijuana if enough people started to grow it. To make anything like that work, you would have to have lots of people getting arrested for growing lots of pot, each one demanding a full jury trial, and exercising each of their rights.

The courts would soon clog shut, and they would instruct the police to be more realistic.

## Fewer Pesticides and Fertilizer

The marijuana plant is really incredible for a lot of reasons, not the least of which is the fact that it's the fastest growing plant known to man, growing up to 40% faster than the fastest bamboos.

Aside from its pure vigor as a plant, the marijuana plant requires far less care and maintenance

than conventional crops.

Less fertilizer and fewer pesticides lead to a healthier environment. Marijuana does better with natural fertilizer—the kind you get from a cow.

Most crops deplete certain compounds from the soil over time, but not pot. There are very deep and healthy root systems on

every plant, and much of that is left in the ground during harvest.

This root system composts and becomes fertilizer itself over time, actually adding more nutrient back to the soil than it removed in the first place. It is really the perfect crop to grow.

## Money is the Root of All Evil

So what is behind all this unrest regarding marijuana? Money. Lots of money is at stake and there are big players at the table who already know the score.

What I've been saying is true, and there are those out there who know it and wish to prevent it from being known.

Big Government doesn't want to be caught in a lie, and also doesn't like 'hard-to-tax' income, especially on this scale.

Big business fears hemp will level the playing field, and reduce the value of their coal, oil, wood and food production operations worldwide.

They are correct to fear hemp, as it is by far the best raw material for manufacturing that the world has ever known. They are wrong to lie about and criticize marijuana. They are evil to raid, pillage, rob, and slander so many good, honest people who just like to smoke a little pot.

"Well, that's just a perfect example of what civil disobedience will get you—ten more miles per hour! That's right, because so many people drove a little over the posted speed, they started allowing you a few miles over in most places."

"They are wrong to lie about and criticize marijuana. They are evil to raid, pillage, rob, and slander so many good, honest people who just like to smoke a little pot."

## **Legalize Domestic Pot to Fight Terror**

Its clear that much of the money Americans spend on illegal drugs gets shipped right out of the country. Just like you see in the commercial, smoking a joint or doing heroin is all the same—it funds terror.

Well, I'm here to say that I couldn't agree more. We need to shut down the illegal imports at the border. Then we need to legalize domestic marijuana to complete the process.

People are a predictable bunch as a whole. If you take away their pot, they will turn to something else, anything else.

With tens of millions of pot

smokers already smoking, it is safe to say that millions will still be smoking pot ten years from now. Let's not turn them into crack addicts because we refused to see the truth about marijuana and took it away.

That's what happens, though. There is a shortage of marijuana on the streets, people begin searching for anything to get them high. They will spin in a chair if it's the only alternative.

By legalizing domestic marijuana, you offer people who use other drugs a safe choice—switch to marijuana or go to jail if caught using hard drugs.

Increased penalties for drugs which can kill people, or that fund terror, but legalized domestic marijuana will provide an alternative that is realistic and safe for all ages.

It is a win-win situation, increasing the amount of money that gets spent on consumer items, and creating new wealth from the same old fields that have been costing money for so long. Keep the money at home.

Hard drugs are a menace to society, but its wrong to lump pot in with cocaine or oxy's. There is just no comparison.

So, legalize domestic marijuana,
